Optimizing system in production scheduling	226, 227	long-term	395
Optimum pit, definition	145, 146	open pit	385
Optimum plant capacity, definition	109	policy in mining enterprise	357
Optimum production, determination by EVOP	168	schedule, determination by linear programming	165
Optimum-seeking program		evolutionary operation technique	168
for flotation circuit	340	scheduling	398
Optimum spacing		copper mine	225
between soil sample traverses	377	dynamic programming, mine-mill	388
Palinspastic base map	185	linear programming	408
Panguna orebody	388	copper mine	285
model	35, 371	long-term	133, 135, 213
Particle composition		open pit planning	159
influence on flotation rate	341	rules for	159
Particle size, influence on flotation rate	341	simulator for planning coal production	123
Particle size distribution		functions	126
in defining crusher system state	93	Profit as function of throughput	165, 166
in flotation specification	344	criteria	3
Particle surface activity		objective as basis for mine planning	2
influence on flotation rate	341	long-term criteria	5
Pearson distributions	17, 19	optimum design and maximum profit	145
Pearsonian shape coefficients	18	potential of exploration investment	3
Permeability, rock	407, 408	Profitability, effects of various factors on	112, 113
in simulation of fluid flow	280, 281	expected	3
Petroleum		factors affecting mining	171
exploration	83, 377	sensitivity analysis	109, 380
wildcat well outcome probabilities	83	Programming, multistage	104
flow underground, simulation	279	Project appraisal, using economic models	355
Planning		cost structuring	109, 114
copper mine, underground	251, 397	Proportional effect in geostatistics	371, 372
corporate	2	Prospecting	
exploration	1	evaluation of geochemical data	73
linear programming in	252	geochemical	377
mining company	2	Public gain	
Monte Carlo simulators in	383	evaluation criterion	47
open pit	385	from mineral exploitation	47
production in coal mines	383	Rapid-yielding prop	402
stope production	241	Reef valuation	
ventilation	299, 305	exploratory development in	119
Plant capacity, crushing	93	inaccuracy in determining	119
Plant feed		value	
to crusher, dependence on size	93	distribution of gold in reef	119
parameter of crusher plant model	93	effect on financial return	115
Poisson distribution of diamond deposits	17, 18	in relation to gold mining venture	118
Porphyry deposit		Refrigeration, simulation	302
geostatistical estimation	27, 28, 29	Regionalized variable	75, 209
Power spectra		Matheron's theory	27, 203
for copper and gold occurrences	194, 197	theory for interpolation of orebody variables	140
Power station, capital cost	42, 45	Reservoir pattern simulation	280
Present value	56, 61, 62	Return rate	52, 53, 54, 56, 57
in relation to cut-off grade	159	Revenue	
of economic discovery	3	from mineral deposit	48
of multiple-seam coal mine	183	in simulation of development economies	2
of surface deposits	155	per mining unit	20
Pressure arch in coal mines	312	Rockbursts	402, 403
Price fluctuations of metals and production policy	357	Rockcutting to decrease stoping width	120
Price forecasting	357	Rock displacement	
structure of diamonds	66	analysis	259
		calculation	402
		failure, prediction	255

matrix, coding	152	frequency of diamonds	21, 65, 66, 67, 68
mechanics	401	of mine, tonnage	49
in design of mine layout	255, 402, 403	"Skimming" in exploration investment economics	6, 7
linear elastic theory applied to	259	Slope angle of open pit	146, 161
stress calculation	402	Soil sample	
prediction	257	concentration of element in	76
Rosenbrock's direct search technique	225, 226, 227	geochemical prospecting	73
method of optimization	396	traverses	377
Rosin-Rammler distribution	318	optimum spacing	75
Rutile	361, 362	Solvent extraction plant	379
		model	237
St. Venant's principle	256	Sorting	173
Sample set from parent orebody	204	Spacing of soil sampling grid	75, 76, 77
Sampling		Spline function	413
grid spacing for soil survey	75	Splitting in crushing plant	95
in valuation of gold mine	119	State assistance scheme for gold mines	375
Scheduling logic in simulating mining	215	Stochastic dynamic programming	389
Screen		Stone density distribution, diamonds	17, 21
analysis, in crushing plant model	93	size, diamond ore deposits	66, 68, 69, 70
efficiency	93	Stope	
Screening	97	closure	402
of crushing plant product	379	design	404
unit operation in crushing plant	95	model in ventilation planning	302
Search		production forecasting	398
applied geology as method	1	planning and forecasting	241
by simulation model	10	rock mechanics in design	255
direct procedure	227	temperature increases in	301
for bare metal orebody	73, 74	tramming width in gold mines	120
for uranium	10	Stoping	
information theory applied to	9	simulation	231, 233
in upgrading program	175	width, effect on financial return	115
Rosenbrock's procedure	225, 226	in gold mines	120
target in exploration	1	rockcutting to decrease	120
theory	10	Strata, elastic response, analysis	259
Selective mining in gold mines	119	Strategy, exploration	4, 5, 6
Sensitivity analysis		Stress, field, in rock, prediction	257
of effect of transport on metal supply	106	rock, analysis	259, 260
of profitability	109, 380	Subjective probability approach	
Separable programming	399	mineral occurrence model	2
Sequential exploration investment	6	Sulphide concentrate, flash smelting plant design	296
Serial correlation, testing for	38	Surface activity effect on flotation rate	341
Sichel's "t" estimator	205	Surface deposit, model for analysing	155
Silver-lead-zinc ore flotation	331	Survey	
Simulation		airborne electromagnetic	1
and economic models	356	costs	1, 2
Engel simulator	9	for uranium, costs	11, 14
gold mining	120	Sweep efficiency for oil well patterns	279
in optimizing design of crushing plant	91, 92		
in planning open pit operations	273	Tabular deposit	401
in search for uranium	11	excavation, rock mechanics in design of	256
Monte Carlo in mine planning	383	orebody, exploration model	189, 393
Monte Carlo or probabilistic	273	Tailings leach plant	237
of concentrator	325	Tax and lease consideration for gold mines	115
of cone crusher	318, 320	formula for gold mines	374
of control of underground liquid flow	407	in exploitation of mineral reserves	374
of crushing plant	91, 98, 379, 413	in relation to economics of surface mining	181
of deposits	106	moratorium effect on profitability	113
of liquid flow underground	279	on gold mines	116
of mineral treatment processes	305	Taxation level	48, 49, 50
of multicomponent flotation plant	325	policy in mineral exploitation	47, 48
of occurrence and exploration of metals	380	Theory of graphs	142
of open pit operation	407	Thermal conditions in mine, calculation	307
of stoping and transport in mines	231	Three-dimensional elastic problem	
of underground operations	395	solution by finite element method	264
of ventilation	268, 305	Tin, exploration target	4
Size		Tonnage related to cut-off grade	212
breakdown array	93	Topographical map, digitization	104
of crusher product	93		
distribution	93		
of crusher product	379		
of diamonds	17, 19, 20, 22, 23, 25		

Topography expressed mathematically	103	Variable	
Total government assistance in mining	375	affecting heat flow in airways	299
Total systems model for planning open pit	161	decision	105
Transportation model, roads	103	in design of flash smelter	297
network, impact on metals supply	99, 379	in model of mine layout design	189
model	103	state	105, 106
program	106	ventilation	267
Transport, underground, simulation	231, 234	Ventilation	401
Trend surface		air velocity in coal mines	312
for interpolating orebody parameters	140	automated, in mines	267
interpolation	104	automatic, model	405
Trend surface equation		control and instruments	269, 270
in examining topographical features	103, 104	cost	271
in selecting transport routes	104	in coal mines	311
Underground liquid flow simulation	279, 407	longwall system	314
Unit operations in crushing plant	94	network	305, 412
Universal kriging for interpolating orebody parameters	140	planning, model	299, 305
Unrolling orebody	185, 186, 393	simulation	305
Upgrading, optimization in plant design	171, 173	stability	267
program	175	variables	267
Uranium		Venture profitability	109, 110, 112
Engel simulator in search for	9	Vertical axis parabolooids	
for electric power generation	373	for interpolation of orebody parameters	140
in Ambrosia lake region	11	Vibrating screen model	317, 319
in Wyoming basin	11		
open pit mine, planning	139	Weight distribution of diamonds	17
predicted use for power generation	41	Well pattern	
requirements for power generation	41	in simulation of underground fluid flow	281, 282
User-orientated systems	395	Wetting-down cycles in stopes, simulation	302
Valuation		Wildcat well, outcome probability	83, 377
boreholes and sampling gold reef	111	Working cost	
of diamondiferous gravels	371	breakdown for gold mine	119
statistical, of diamond deposits	17	dependence on tonnage and area mined	120
Variogram	393	effect on financial return	115
De Wijsian	31	X-ray	
function computation	28, 29	analysis for sampling flotation products	332
horizontal	209	analysis system for controlling concentrator	325, 326
in theory of regionalized variables	203		
semi- and spherical	203, 204	Zinc, geochemical prospecting	74
three-dimensional	29	Zircon in mineral sands	361, 362
