

Mineral Asset Valuation

A critical component in a purchase price allocation

02 October 2025

The better the question. The better the answer. The better the world works.

Introduction to Purchase Price Allocation (PPA)

Definition of PPA

PPA allocates the purchase price of an acquired company to identifiable assets and liabilities.

Accounting values are reset from acquirer's perspective.

Mining Industry Assets

Mining operations assets include tangible items like processing plant, equipment, mineral reserves and intangible assets such as licenses or off-takes agreements that could be separately valued.

Industry-Specific Challenges

Mining PPA involves challenges like fluctuating commodity prices, geological uncertainties, and regulatory issues.

Asset Valuation Challenges in Mining

Geological Uncertainty

Resource estimation is complex with Measured, Indicated, and Inferred categories varying in confidence and economic impact.

- ▶ The classification of Mineral Resource varies throughout the project lifecycle. As with increasing geological information and the change from one stage of the cycle to the next, so are the different valuation methodologies applied to each stage.
- ▶ The Project value increases with more geological information. Generally, the cost approach and market approach are more suitable for early-stage mining projects, whilst market and income approach are more suitable for mature and producing mining projects.

Accounting now standards differentiate between a business and asset acquisition.

Explorational and development assets are typically not seen as meeting a definition of a “business” projections and investment decisions in mining asset valuation.

A PPA in terms of a business combination would therefore be associated with an operation mine with income approach likely being a primary valuation approach with market approach as corroborative.

Discounted Cash Flow (DCF) factors

- ▶ The Income Approach by the DCF application is a culmination of technical and financial assumptions including, but not limited to the following:

Plant valuation factors:

- ▶ Physical condition
- ▶ Capacity vs utilization
- ▶ Design existing vs a modern equivalent
- ▶ Inflation impacts
- ▶ Technological obsolescence

Mineral Asset Valuation Approach

Residual approach

Identification

As is common in all mines, reserves and resources are critical and a major value driver to the business. The value of these assets is captured in the mining right.

Valuation methodology

We typically use the DCF methodology in estimating the fair value of the mining right.

- The principle behind the method is that the value of the mining right is equal to the present value of the incremental after-tax cashflows after deducting all costs associated with the mineral reserve extraction, liabilities and returns of and on assets.
- We further evaluate the impact of commodity price assumptions in the following slides.

Life of Mine Value ¹	A
Less: Total contributing tangible and intangible asset values	B
Inventory step up	xxx
PP&E	xxx
Any other intangibles ²	xxx
Workforce ³	xxx
Fair Market Value of Mineral Reserves	C=(A-B)

1. Based on LoM DCF.
2. Include intangible assets identified and values under various approaches.
3. Based on estimated avoided cost of acquired employees.

The continuous debate on pricing...

Market Volatility

- ▶ Commodity price fluctuations significantly affect revenue projections and investment decisions in mining asset valuation.
- ▶ Lag between deal announcement and closure can be prolonged – regulatory approvals can result in deal economics that are “stale”
- ▶ Recency bias is prevalent in consensus
 - ▶ What is practice in the market?
 - ▶ What are the alternatives?

Regulatory and ESG Factors

Permitting risks, environmental liabilities, and community relations influence mining project feasibility and timelines.

Multidisciplinary Approach

Combining geological, financial, and regulatory expertise is essential for accurate and defensible mining asset valuations.

The continuous debate on pricing...

Market Volatility

- ▶ Commodity price fluctuations significantly affect revenue projections and investment decisions in mining asset valuation.
- ▶ Lag between deal announcement and closure can be prolonged – regulatory approvals can result in deal economics that are “stale”
- ▶ Recency bias is prevalent in consensus
 - ▶ What is practice in the market?
 - ▶ What are the alternatives?

Regulatory and ESG Factors

Permitting risks, environmental liabilities, and community relations influence mining project feasibility and timelines.

Multidisciplinary Approach

Combining geological, financial, and regulatory expertise is essential for accurate and defensible mining asset valuations.

Importance and role of PPA

An accurate PPA:

- ▶ ensures compliance with standards and realigns accounting values to reflect economic potential of assets.
- ▶ provides a post-mortem view of where value lies.
- ▶ An appropriate allocation to mining right is essential to ensure appropriate costing to production post the transaction.
- ▶ Value vs Price
 - ▶ Is “Goodwill” actually bad?
 - ▶ Implications on future reporting for impairment starting point

Conclusion

PPA is a necessary tool in assessing the opening values of an acquiree with mineral asset valuation representing a critical component for a complete valuation perspective to be presented.

EY | Building a better working world

EY is building a better working world by creating new value for clients, people, society and the planet, while building trust in capital markets.

Enabled by data, AI and advanced technology, EY teams help clients shape the future with confidence and develop answers for the most pressing issues of today and tomorrow.

EY teams work across a full spectrum of services in assurance, consulting, tax, strategy and transactions. Fueled by sector insights, a globally connected, multidisciplinary network and diverse ecosystem partners, EY teams can provide services in more than 150 countries and territories.

All in to shape the future with confidence.

EY refers to the global organization, and may refer to one or more, of the member firms of Ernst & Young Global Limited, each of which is a separate legal entity. Ernst & Young Global Limited, a UK company limited by guarantee, does not provide services to clients. Information about how EY collects and uses personal data and a description of the rights individuals have under data protection legislation are available via ey.com/privacy. EY member firms do not practice law where prohibited by local laws. For more information about our organization, please visit ey.com.

About EY-Parthenon

Our unique combination of transformative strategy, transactions and corporate finance delivers real-world value – solutions that work in practice, not just on paper.

Benefiting from EY's full spectrum of services, we've reimagined strategic consulting to work in a world of increasing complexity. With deep functional and sector expertise, paired with innovative AI-powered technology and an investor mindset, we partner with CEOs, boards, private equity and governments every step of the way – enabling you to shape your future with confidence.

EY-Parthenon is a brand under which a number of EY member firms across the globe provide strategy consulting services. For more information, please visit www.ey.com/parthenon.
