

CRITICAL RISK MANAGEMENT

With more than 1,000 operating sites using CRM+ to achieve and maintain zero fatalities, Forwood is the global leader in fatality and serious injury prevention.

How to keep 85,000 miners safe, five years straight.

There is nothing else, other than life. The loss of just one miner diminishes us all. It's why an end to end fatality prevention, and CRM+, has been the heart of our business from day one.

Move forward and be fatality free with CRM+.

Our 'best in class' Critical Risk Management system has been chosen by leading, multi-national miners, contractors, construction companies and other high-risk industries. We help them achieve a reduction in injuries and, incredibly, zero fatalities.

For the second biggest miner in the world, with approximately 85,000 employees and contractors on six continents, an outstanding accomplishment of zero workplace fatalities has been achieved consecutively for many years.

This is even more remarkable given that among members of the International Council on Mining and Metals (ICMM), 44 mine workers lost their lives in 2021 alone¹.

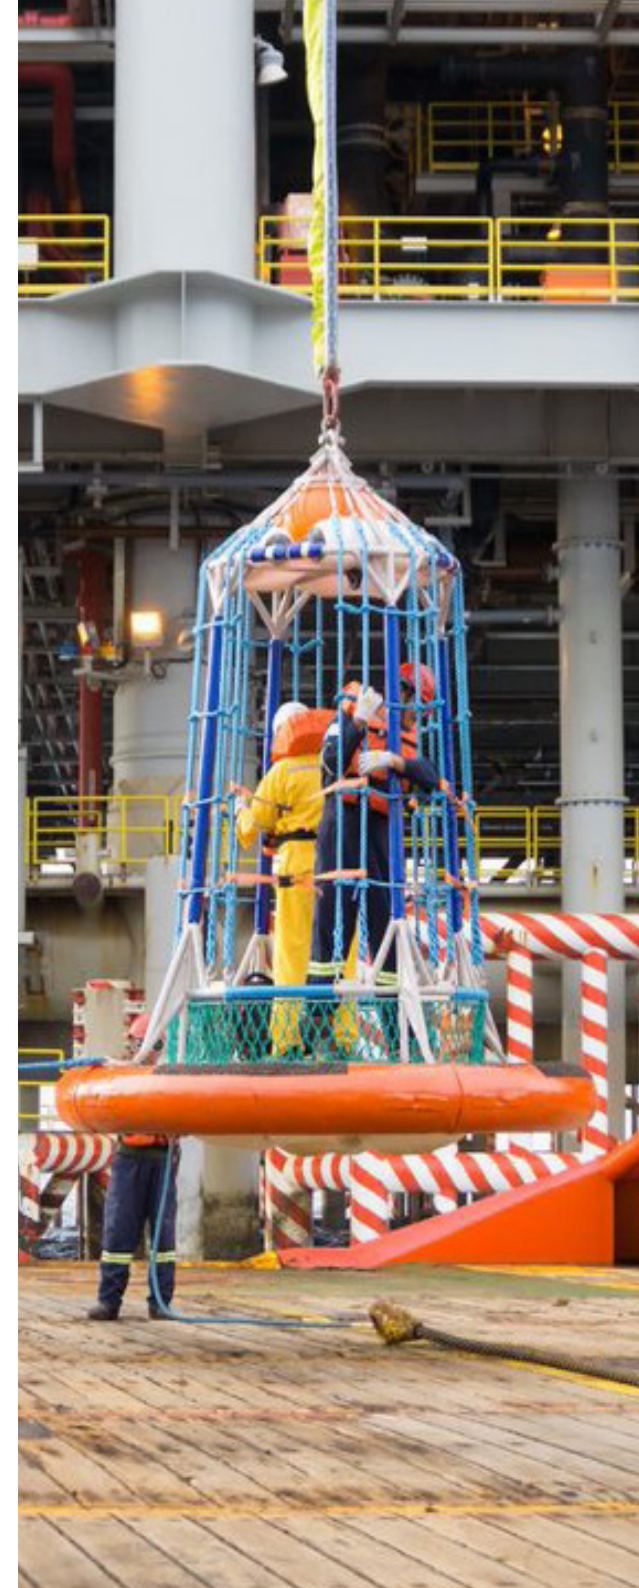

We believe all workplace fatalities are preventable.

A major South African miner recently celebrated 10 million fatality free shifts. This successful outcome is partly attributable to the implementation of Forwood CRM+. A Tier 1 Australian miner achieved 8 years fatality free, while incorporating industry leading, life saving verifications immediately. Indeed, all Forwood CRM+ clients are fatality free after the full implementation of CRM+.

There are many safety systems on the market but none deliver results like Forwood. Our 'fully integrated' Software as a Service (SaaS), Methodology and Content, is designed and built to provide a laser focus on fatality prevention, protecting front line workers from serious harm by strengthening critical controls and risk management culture throughout your business. Over the last 15 years there were more than three hundred and fifty million critical control verification data points generated across tens of thousands of active users.

Even better, launching Forwood CRM+ takes hours not months. You can access the system and begin conducting industry leading, life-saving verifications immediately.

Finally, there's nothing stopping you from saving lives.

Benefits of CRM+

Time-to-Value

CRM+ is a production-ready solution. Your business can be live with CRM immediately.

Flexible Technology

CRM+ is highly scalable, configurable and capable of integrating with all major EHS and risk management solutions.

Data driven Insights

Live data on compliance and failures enables managers to identify hot spots and take action before incidents occur. Move from reactive to proactive risk management due to CRM+'s advanced data analytics.

Eradicate fatalities

Over 1,000+ sites worldwide are sustainably fatality free to date after the introduction of CRM+.

Benchmarking Capability

Comparative and predictive forecasting capability, leveraging 350 million anonymized critical control data points from 1,000+ sites globally.

Forwood CRM Community

New and updated versions of Verification Checklist are released to all customers worldwide. This enables shared learnings, shared improvements and shared success.

No other CRM in the world saved more lives.

Fatalities without Forwood CRM+

792

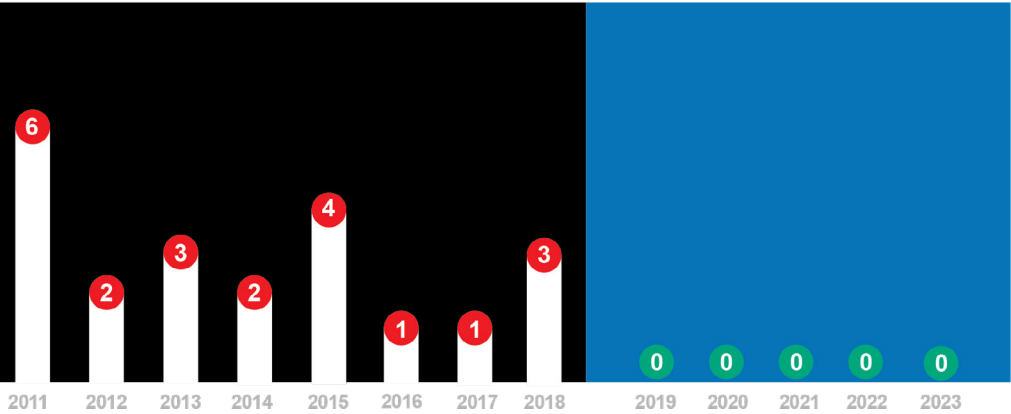

Fatalities with Forwood CRM+

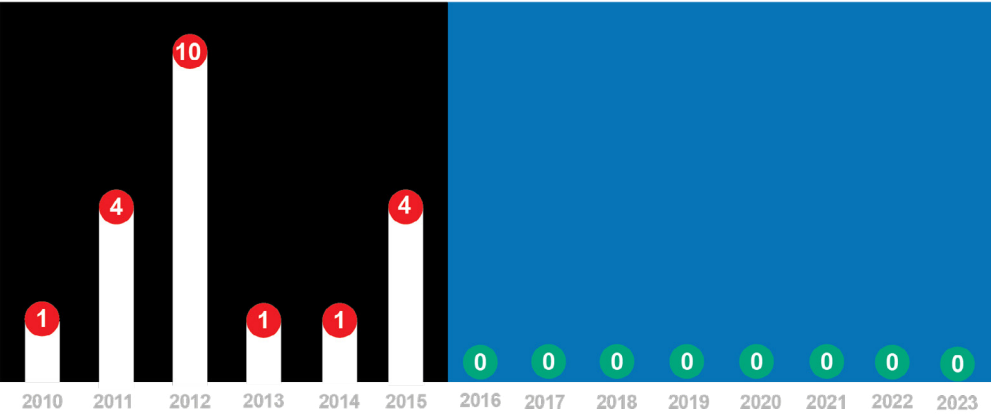

ZERO

In the years 2012-2020, ICMM member companies who had not implemented Forwood's CRM+ suffered a staggering 792 workplace fatalities. In the same period, those mining companies who had already fully implemented Forwood's CRM+, did not experience a workplace fatality. If you are a CEO, executive or site manager who is serious about eliminating fatalities, year after year, you should contact us.

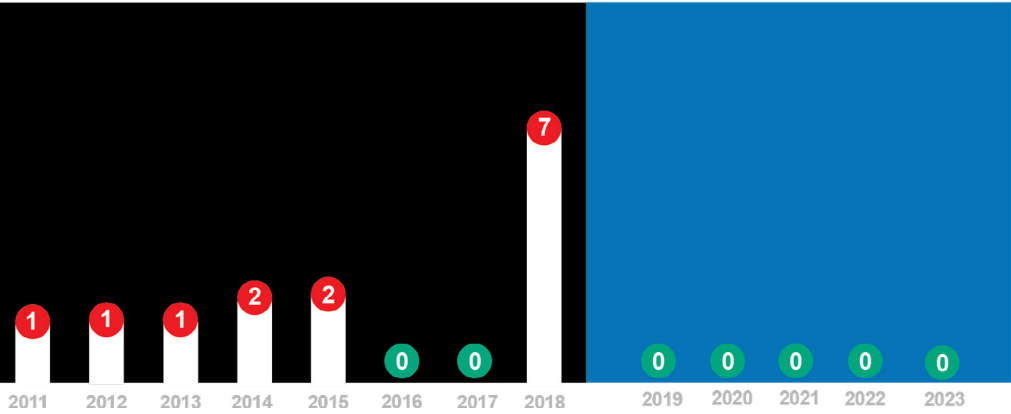

Tier 1 Australian mining company - 85,000 employees/contractors

Tier 1 Australian mining company - 31,000 employees/contractors

Tier 1 North American mining company - 11,000 employees/contractors

Key features

Laser Focus

CRM+ is designed and built to provide a laser focus on fatality prevention, protecting front line workers from serious harm by changing the culture of risk management throughout your business.

Simplicity

Easy to use app, with corresponding pictograms, enable everyone to participate in fatality prevention.

Tiered Methodology

CRM+'s 3-tiered verification methodology establishes a triple cross-check on all Critical Risks and Controls, providing a unique opportunity to identify, recognize, manage, and ultimately block fatal risks.

Online & Offline

Online and offline native app, for apple and android, works equally as well where connectivity is limited or unavailable.

Geo Maps

All verification data can be geo-located, on the surface and underground, to enable data to be viewed by site.

End to end Solution

A full end to end Risk Management Process with a Patent Protected Critical Control Verification System.

Seamless integration

CRM+ seamlessly integrates with all major EHS & risk management solutions.

Content

CRM+'s Critical Control Checklists are industry best practice, honed over many years in the field.

Multi-Lingual

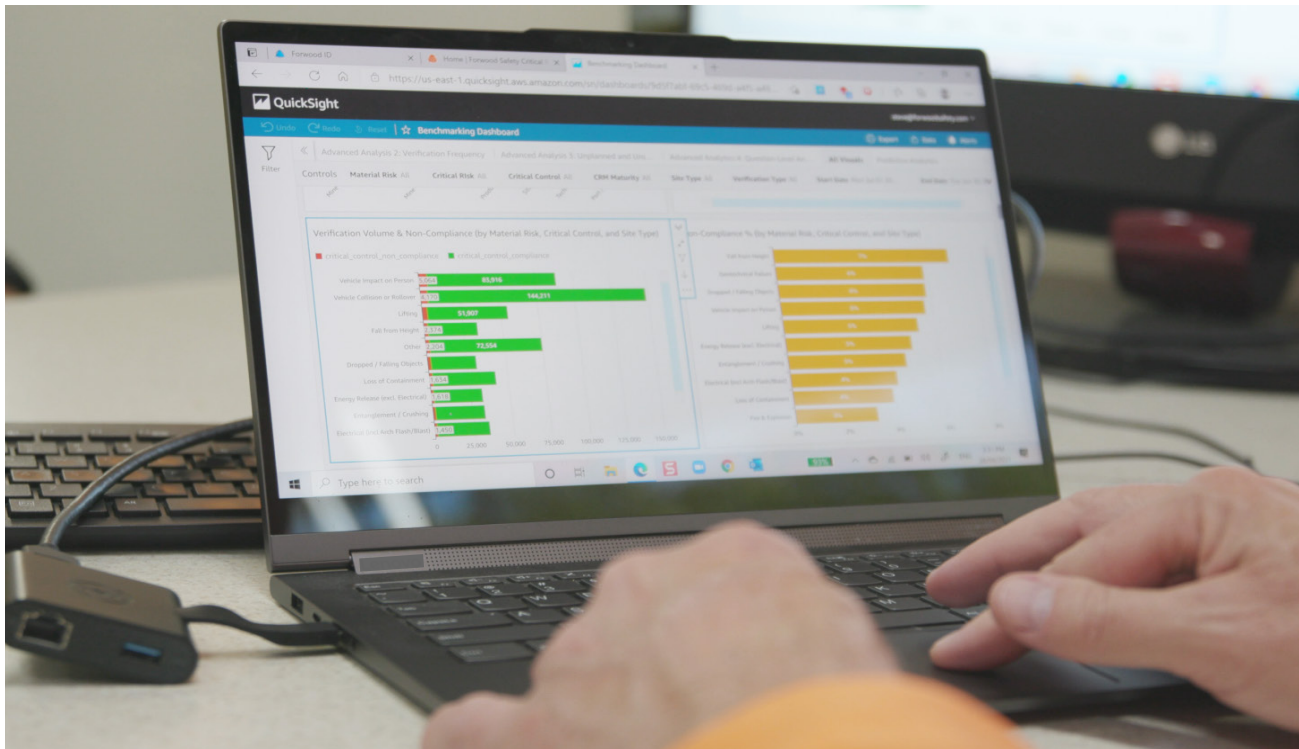

Available in 22+ languages, and continually expanding.

Forwood's Analytical Self-Service Tool (FAST)

FAST is a powerful data analytics platform specifically designed to analyse, predict and understand risk data. FAST comprises the most advanced fatality prevention analytics on the market, including a powerful suite of dashboards, interactive data sets and machine learning (ML) tools. Live data on critical control compliance and failures enables managers to identify hot spots and take action before accidents occur. You can discover trends and outliers that often go unseen in traditional reporting metrics.

Key Features:

- > Unique predictive capability
- > Natural language data analysis
- > Pre-built dashboards
specific to fatality prevention
- > Self-service reports for flexible
customized reporting
- > Business intelligence and data insights
- > Serverless, scalable architecture
- > Configurable visualisation options
for greater understanding
- > Incorporated AI and machine learning algorithms,
with predictive analytics and anomaly detection
