

List of Abstracts — HEAVY MINERALS CONFERENCE — 5–6 August 2019

Heavy mineral deposits: From exploration to model

Independent Geological and Geotechnical Consultant, South Africa

River system hosted heavy mineral deposits

Independent Geological and Geotechnical Consultant, South Africa

Techno-economic evaluation of mining and processing of heavy mineral sands from the Brahmaputra river basin

Bangladesh|Bangladesh Council of Scientific and Industrial Research (BCSIR), CSIRO Mineral Resources, RMIT University, India and Australia

The development and processing of Australian mineral sand deposits

CSIRO Mineral Resources, Australia

De-Bottlenecking of Vertical Pressure Airflow Filter for Optimizing Moisture and Throughput at JSW Steel Limited – Case Study

JSW Steel Ltd, India

The Influence of reductant properties on ilmenite smelting

Ex Mente Technologies, Tronox, Portnex, University of Pretoria, South Africa

The challenge of ilmenite smelting: reality or myth

Ex Mente Technologies, University of Pretoria, South Africa

Improving furnace start-ups with computational modelling: The key to refractory lining integrity

Ex Mente Technologies, AMIC, Portnex, University of Pretoria, South Africa

Geometallurgical approach to enhance the gravity beneficiation of a Sr deposit

Eramet Ideas, France

Response of sulfate grade TiO₂ feedstocks to a standard digestion test and implications for use in assessing feedstock suitability for the sulfate pigment production process

TZ Minerals International, Australia

Detailed mineralogical leucoxene characterization: A base for physical beneficiation to improve rutile recoveries

Eramet Research, Laboratory Chrono-Environnement, France

DC Furnace Smelting of Ilmenite and Chromite: Diverging Paths SMS Group, University of Pretoria, Ex Mente Technologies, South Africa

Comparative studies on leaching of South African ilmenite concentrate by hydrochloric acid solution in the presence of additives Tshwane University of Technology, University of Johannesburg, South Africa

Reduction sequence and mechanism of carbothermic reduction of low grade titanium ore: South African ilmenite as a case study

University of Johannesburg, Tshwane University of Technology, South Africa

An electrochemical study and thermodynamic data quantification of pre-oxidised ilmenite metastable phases

Tshwane University of Technology, University of Johannesburg, South Africa

Effects of milling parameters on the reducibility of low grade South African ilmenite

Tshwane University of Technology, University of Johannesburg, South Africa

Recovery of ferrochromium from the ferrochromium industrial slags

University of the Witwatersrand, South Africa

Broadening the application of gravity concentrators with a new spiral for 3 mm heavy minerals

Multotec, South Africa

New heavy mineral spiral for recovery of ultrafine chromite

Multotec, South Africa

Spiral grade measurement and control

Mintek, South Africa

Land use versus land capability in mine closure planning

Iluka, Sierra Leone

Ilmenite pre-reduction revisited: A flow sheet incorporating a circulating fluidized bed and smelting

Ex Mente Technologies, University of Pretoria, University of the Witwatersrand, South Africa

Future-proofing mineral sand mining through advances in mobile dry mining methods

Downer Group, South Africa

Polymer treated tailings for enhanced mineral sands deposition management: A geotechnical modelling approach

BASF South Africa (Pty), BASF Performance Products plc, BASF Canada Inc., South Africa, United Kingdom, Canada
