The SAIMM is going Digital!

As part of our digital transformation journey, this year we are excited to host the Renewable Energy Webinar and PRÉMA Workshop as a completely new digital experience.

SAIMM announces the addition of the PRÉMA workshop to the Renewable Solutions for Energy Intensive Industry webinar on the 4th of November. PRÉMA (<https://www.spire2030.eu/PREMA>) is a H2020 project aimed at demonstrating an innovative suite of technologies, involving use of industrial off-gases and solar thermal energy to reduce energy consumption and CO₂ emissions from manganese production as a means to obtain sustainable production of Mn-alloys and steel. The project has an international consortium, including several South African partners. The online workshop on the 4th of November 2020 aims to gather input from stakeholders outside of the PRÉMA consortium regarding the technologies proposed. The Workshop will start with an overview of the concepts proposed in PRÉMA and the results already available in the public domain. The workshop will then invite stakeholders questions, comments and recommendations on the PRÉMA project specifically, but also on how other renewable solutions projects can be advanced to industrial implementation. To participate, please register for the free colloquium (https://saimm.zoom.us/webinar/register/WN_vWdjQnCdShyu_orraIXVAQ).

The full programme and agenda for the workshop will be communicated mid-October based on registrations. The programme of confirmed speakers for the webinar may be found at <https://www.saimm.co.za/saimm-events/upcoming-events/renewable-solutions-for-energy-intensive-industry-2020>.

The PRÉMA project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 820561.

PERSONAL DETAILS

Title First Name Other Initials Surname/Family Name

Preferred Name (for use on name badge)

Company Designation

Company VAT Registration (**Compulsory—SA companies**) Order No
